SOME HISTORY

The classification of hazardous areas into zones established the level of protection required for electrical equipment installed in explosive gas and dust atmospheres.

The two following standards define the areas:

IEC-EN 60079-10-1: Classification of areas, explosive gas atmospheres

IEC-EN 60079-10-2: Classification of areas, combustible dust atmospheres

The selection and construction of electrical installations is defined by standard IEC-EN 60079-14.

DEFINITION OF A PLACE WHERE A POTENTIALLY EXPLOSIVE ATMOSPHERE MAY OCCUR

The classification of an installation into distinct zones has two objectives (according to ATEX 1999/92/EC):

- To define the categories of equipment used in the zones indicated, provided they are suitable for gases, vapours or mists and/or dusts.
- To classify hazardous places into zones to prevent ignition sources and be able to select the correct electrical and non-electrical equipment accordingly. The zones are defined on the basis of the occurrence of explosive gaseous or dusty atmospheres.

GAS GROUPS

Group II : Equipment intended for use in places with an explosive gas atmosphere other than mines susceptible to firedamp.

Group I : Equipment intended for use in mines susceptible to firedamp.

	Zone	Category (ATEX 2014/34/EU)	Presence of explosive atmospheres
Group II	zone 0	1 G ⁽¹⁾	Continuous, frequent or for long periods
	zone 1	2 G	Intermittent in normal operation (likely)
	zone 2	3 G	Occasional or for short periods (never in normal operation)
Group I (mines)		M1 ⁽¹⁾	Presence (methane, dust)
		M2	Risk of presence (methane, dust)

DUST GROUPS (IEC 60079-0)

Group III : Equipment intended for use in places with an explosive dust atmosphere other than mines susceptible to firedamp.

	Zone	Category (ATEX 2014/34/EU)	Presence of explosive atmospheres
Group III	zone 20	1 D ⁽¹⁾	Continuous, frequent or for long periods (air/cloud of combustible dust)
	zone 21	2 D	Intermittent in normal operation
	zone 22	3 D	Occasional or for short periods

The classification of the installation is **the responsibility of the user**. He must individually evaluate each installation to determine the differences between them.

Separate assessments must be made for places with potentially explosive atmospheres caused by gases or vapours and for those caused by dusts.

EQUIPMENT PROTECTION LEVELS - EPLs

In normal circumstances the effect of the EPLs will be to retain the normal zone/equipment protection relationship. If, however, the risk is considered especially severe, then the required EPL for the zone may be increased. Similarly, if the risk is deemed to be especially small or negligible, the EPL may be reduced from the norm.

The following table shows the normal relationship between EPL and zone/category (without supplementary risk assessment).

Equipment Protection Level (EPL)	Normal Applicable Zone(s)	Category (2014/34/EU)
Ga	0 (and 1 and 2)	1G
Gb	1 (and 2)	2G
Gc	2	3G
Da	20 (and 21 and 22)	1D
Db	21 (and 22)	2D
Dc	22	3D
Ma / Mb	mines	M1 / M2

⁽¹⁾ G = gas ; D = dust ; M = mines

EXAMPLES OF A CLASSIFICATION INTO ZONES

Drawing **A** of an explosive atmosphere caused by gas:

Drawing **B** of an explosive atmosphere caused by dust:

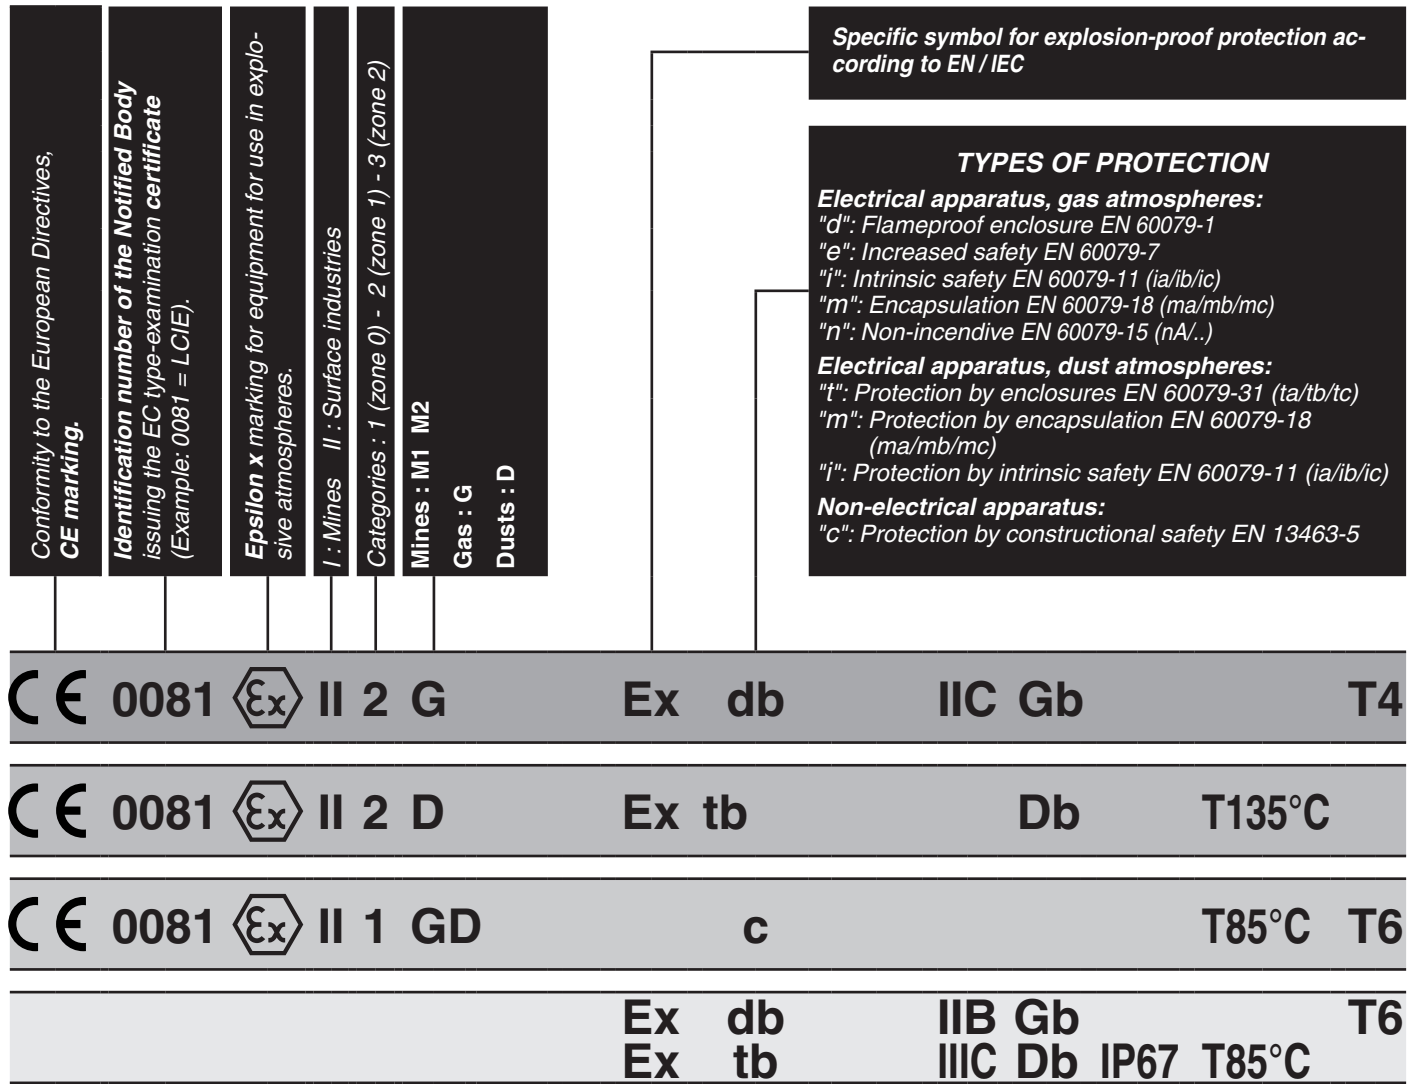

Above drawings **A** and **B** are an example only and must not be used as a model for an actual plant whose design is, in every case, the responsibility of the constructor and operator.

All leaflets are available on: www.asco.com

HOW CAN ATEX, EN-IEC 60079-0 OR EN 13463-1 APPROVED APPARATUS FOR USE IN EXPLOSIVE ATMOSPHERES BE IDENTIFIED?

ma or ia = for use in zone 0 gas (D = Dusts)
mb or ib = for use in zone 1 gas (D = Dusts)

Equipment groups (IIA, IIB, IIC, IIIA, IIIB, IIIC)

Maximum surface temperature

Temperature class

Enclosure ingress protection (IP) rating for dust (EN 60529)

Equipment Protection Level (EPL)

CLASSIFICATION OF GASES INTO EXPLOSION GROUPS

Group I : Electrical equipment intended for use in the underground parts of mines, and to those parts of surface installations of such mines, likely to become endangered by firedamp and/or combustible dust.

Group II : Electrical equipment intended for use in other places likely to become endangered by explosive atmospheres (surface industries).

For the types of protection "d" and "i", group II is subdivided into IIA, IIB, IIC. Electrical apparatus certified for IIB may be used in applications requiring apparatus to be certified for group IIA. Electrical apparatus certified for IIC may be used in applications requiring apparatus to be certified for groups IIA and IIB.

For example the "d" and "i" types of protection are respectively subdivided according to the Maximum Experimental Safe Gap (MESG) and to the Minimum Igniting Current (MIC).

Electrical apparatus certified for IIB may be certified for use with a gas belonging to group IIC. In this case, the identification is supplemented with the chemical symbol or the name of the gas (example: Ex d IIB + H₂ according to EN 60079-0 and EN 60079.1).

The table below indicates the groups to which some gas mixtures belong:

Groups	Gas	Ignition temperature ⁽¹⁾ (°C)	Temperature class						
			T1	T2	T3	T4	T5	T6	
I	methane (firedamp)								
II	A	acetone	540	•					
		acetic acide	485	•					
		ammonia	630	•					
		ethane	515	•					
		methylene chloride	556	•					
		methane (CH ₄)	537	•					
	B	carbon monoxyde	605	•					
		propane	470	•					
		n-butane	365		•				
		n-butyl	370		•				
		n-hexane	240			•			
		acetaldehyde	140				•		
	C	ethyl ether	160				•		
		ethyl nitrite	90						•
		ethylene	425		•				
B	ethyl oxyde	429-440		•					
	hydrogen sulfide	270			•				
	acetylene (C ₂ H ₂)	305		•					
C	carbon disulphide (CS ₂)	102						•	
	hydrogen (H ₂)	560	•						

⁽¹⁾ Temperature of a hot surface able to ignite a gas mixture.

The ignition temperature of the gas mixture must be higher than the maximum surface temperature. In practice, a 10 to 20% safety margin is observed between the ignition temperature and the rated nameplate temperature.

The ignition temperature of a cloud of dust is generally between 300 and 700°C. At 150 to 350°C, the ignition temperature of a layer of dust is far below that of a dust cloud. A burning dust layer can initiate a dust explosion if brought in contact with a combustible dust cloud, so these values must be taken into account to limit the risk.

TEMPERATURE CLASS

The temperature classification is based on the maximum surface temperature of equipment. That is the highest temperature any part of or the entire surface of an electrical device can reach under the most unfavourable operating conditions capable of igniting a surrounding explosive atmosphere.

Group I : Temperature ≤ 150°C or ≤ 450°C according to coal dust accumulation on equipment

Group II : Equipment must be classified and marked:

- preferably with the temperature class (T classification)
- defined by the surface temperature or,
- limited to the specified flammable gases or dusts for which it is approved, if necessary (and marked accordingly).

Temperature class	Maximum surface temperature (°C)	Ignition temperature ⁽¹⁾ (°C)
T1	450	> 450
T2	300	> 300
T3	200	> 200
T4	135	> 135
T5	100	> 100
T6	85	> 85

CLASSIFICATION OF DUSTS INTO EXPLOSION GROUPS (IEC 60079-0)

Group III : Electrical equipment intended for use in places with an explosive dust atmosphere other than mines susceptible to firedamp.

Group III is subdivided into **IIIA** (combustible flyings), **IIIB** (non-conductive dust) and **IIIC** (conductive dust).

Combustible dust: Finely divided solid particles, 500 µm or less in nominal size, which may be suspended in air, may settle out of the atmosphere under their own weight, may burn or glow in air, and may form explosive mixtures with air at atmospheric pressure and normal temperatures.

Non-conductive dust: Combustible dust with electrical resistivity greater than $10^3 \Omega.m$

Conductive dust: Combustible dust with electrical resistivity equal to or less than $10^3 \Omega.m$

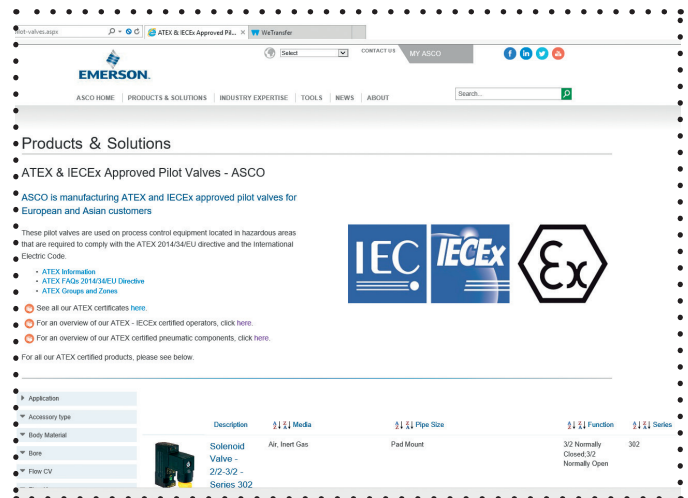

Combustible dust	Ignition temperature ⁽¹⁾ (°C)	Self-ignition temperature of dust layers ⁽¹⁾ (°C)
Starch	440	290
Aluminium	530	280
Cotton	560	350
Cereals	420	290
Magnesium	610	410
Soybean	500	245
Sulphur	280	280
Tabacco	450	300

- ⁽¹⁾ The maximum surface temperature must be identified and suitable for the specified type of dust present (equipment marked for zone 21). In order to prevent the ignition of dusty atmospheres, the maximum surface temperature needs to be limited. It must not exceed:
- 2/3 of the auto-ignition temperature of the specified **cloud of dust**,
 - the auto-ignition temperature of a 5 mm **layer of dust** minus 75°C.

TYPE EXAMINATION CERTIFICATES

SELECTION OF PRODUCTS

available at "www.asco.com"

Certificates issued by the IECEx Certified Equipment Program are issued as "Electronic Certificates" and are live on the IECEx Website. This enables full public access for viewing and printing. Visit the IECEx "On-Line Certificate" System.

FEATURES

- Explosionproof operator for use in potentially explosive atmospheres according to ATEX-Directive 2014/34/EU
EC type examination certificate no.: **LCIE 10 ATEX 3043X**
IECEX Certificate of Conformity no.: **IECEX LCI 10.0010X**
- Compliance with the Essential Health and Safety Requirements has been assured by compliance with the International and European Standards IEC and EN: 60079-0, 60079-1 and 60079-31
- Easy electrical installation by means of a screw terminal coil
- Enclosure provided with a 1/2 NPT threaded entry hole for a broad range of cable entries
- Ingress protection degree IP67 - NEMA 4/4X
- A wide range of valves can be supplied with the operator

CONSTRUCTION

Check the wattage compatibility with the product selected.

⁽¹⁾ The minimum allowable ambient temperature is -40°C for the operator. Actual temperature range can be limited depending on valve operation limits.

⁽²⁾ AC (-): rectified coil construction.

⁽³⁾ 24 V DC value.

⁽⁴⁾ Maximum cold wattage.

⁽⁵⁾ For the layout of the control circuit, see the installation and maintenance instructions at: www.asco.com

CONNECTIONS

- Any IECEx-ATEX approved cable entry device can be fitted in the 1/2" NPT threaded entry hole
- Internal and external earthing connection
- The operator can be rotated through 360° to select the most favourable position for cable entry

OPTIONS

- Brass nickel plated cable gland

ORDERING INFORMATION

A valve supplied with the explosionproof operator will be identified with prefix LPKF or WSLPKF before the catalogue number.

Example: **LPKF** G 551B305 24V/DC

CONNECTIONS

- Any ATEX approved cable entry device can be fitted in the 1/2 NPT threaded entry hole (M20 x 1.5 in option). Refer to the nameplate for identification of the maximum cable temperature
- Internal and external earthing connection
- The operator can be rotated through 360° to select the most favourable position for cable entry

DIMENSIONS (mm), WEIGHT (kg)

TYPE NF-WSNF
Prefix "NF", "WSNF" Solenoid / Electrical interface FN/FS/FT/FU
Aluminium, stainless steel
(NF, epoxy coated)
EN-IEC 60079-1 and EN-IEC 60079-31
II 2G Ex db IIC Gb, II 2D Ex tb IIIC Db IP66/67

series	weight
NF	1,4
WSNF	2,7

① 2 mounting holes M5, depth 9 mm

FEATURES

- Explosionproof operator for use in potentially explosive atmospheres according to ATEX-Directive 2014/34/EU
EC type examination certificate no.: **LCIE 10 ATEX 3043X**
IECEX Certificate of Conformity no.: **IECEX LCI 10.0010X**
- Compliance with the Essential Health and Safety Requirements has been assured by compliance with the International and European Standards IEC and EN: 60079-0, 60079-1 and 60079-31
- Easy electrical installation by means of a screw terminal coil
- Enclosure provided with a 1/2 NPT threaded entry hole for a broad range of cable entries
- A wide range of valves can be supplied with the CNOMO size 30 solenoid pilot interface

GENERAL

Differential pressure	See «SPECIFICATIONS» [1 bar =100 kPa]
Flow	See «SPECIFICATIONS»
Pneumatic base	ISO 15218 (CNOMO E06.05.80, size 50)
Response time	70 - 140 ms

fluids (*)	temperature range (TS)	seal materials (*)
air or inert gas	- 25°C to +60°C	NBR (nitrile) FPM (fluoroelastomer) VMQ (silicone)

GENERAL

Solenoid enclosure	Aluminium, cataphoresis black painting
Cover screws	Stainless steel
Nameplate	Aluminium

MATERIALS IN CONTACT WITH FLUID	
(*) Ensure that the compatibility of the fluids in contact with the materials is verified	
Body	Aluminium, black painting
Core, core tube and plugnut	Stainless steel
Springs	Stainless steel
Seals	VMQ
Upper disc	FPM
Lower disc	NBR

SAFETY CODE

With maintained manual operator
N01 = NBR disc and seals

Electrical interface
Standard
GN = 1/2 NPT female thread cable entry screw terminal

Option
GT = M20 x 1,5 female thread cable entry screw terminal

INSTALLATION

- The solenoid valves can be mounted in any position without affecting operation
- The solenoid valves are supplied with mounting screws
- Mounting on valve or single, non-joinable subbase with ISO 15218 (CNOMO, size 30) interface
- Installation/maintenance instructions are included with each valve

OPERATOR CONNECTION

- Any ATEX approved cable entry device can be fitted in the 1/2" NPT threaded entry hole (M20 x 1.5, in option); supplied without cable gland
- Internal and external earthing connection
- The operator can be rotated through 360° to select the most favourable position for cable entry

FEATURES

- Explosionproof operator for use in potentially explosive atmospheres according to ATEX-Directive 2014/34/EU
EC type examination certificate no.: **LCIE 09 ATEX 3054 X**
IECEX Certificate of Conformity no.: **IECEX LCI 09.0022X**
- Compliance with the Essential Health and Safety Requirements has been assured by compliance with the International and European Standards IEC and EN: 60079-0, 60079-11 and 60079-31
- Easy electrical installation by means of a screw terminal coil
- Enclosure provided with a cable gland for unarmoured cable with an o.d. of 6 to 12 mm
- Ingress protection degree IP67
- For solenoid operator type WSLI for use in mines susceptible to firedamp, group I: see "Options"
- A wide range of valves can be supplied with the operator

CONSTRUCTION

Solenoid enclosure	LI	Aluminium, cataphoresis black painting
	WSLI	Stainless steel (AISI 316L)
Bonnet	LI	Stainless steel
	WSLI	Stainless steel (AISI 316L)
Cover screws		Stainless steel
Core, core tube and plugnut		Stainless steel
Seals		VMQ
Upper disc		FPM
Lower disc		NBR
Nameplate		Stainless steel
Coil connection		Embedded screw terminals
Cable gland		Polyamide (PA), 1/2 NPT (cable Ø 7-12 mm)
Safety code	LI ⁽¹⁾ / WSLI ⁽¹⁾	II 1G Ex ia IIC T6 Ga II 2D Ex tb IIIC T85°C IP66/IP67 Db

⁽¹⁾ For use in zone 0 locations, see the installation conditions given in the I&M instructions.

ELECTRICAL CHARACTERISTICS

(W)	(V)	(mA)	(W)	(H)	(μF)		
0,5	32	500	1,5	0	0		

Example of use with a Zener barrier installed in a non-hazardous zone

TEMPERATURE CLASSIFICATION TABLES

DC (=) solenoids

P _n (watt)	solenoid size		maximum ambient °C ⁽²⁾
		M6	surface temperature
			T6 85°C
insulation class F (155°C) 100% E.D. ⁽³⁾			
0,5		●	60

Check the wattage compatibility with the product selected.

⁽²⁾ The minimum allowable ambient temperature is **-40°C for the operator**. Actual temperature range can be limited depending on valve operation limits. **-35°C max. with polyamide cable gland.**

⁽³⁾ This intrinsically safe valve must be connected to a specific, approved power supply (safety barrier or interface) located in a safe area. See list of safety barriers/interfaces on page 2.

⁽⁴⁾ Refer to the dimensional drawings on the following page.

CONNECTIONS

- Internal and external earthing connection
- The operator can be rotated through 360° to select the most favourable position for cable entry
- Electrical connection between solenoid valve and barrier/interface with cable type A or B according to EN 50039

ORDERING INFORMATION

A valve supplied with the intrinsically safe operator will be identified with prefix LI or WSLI before the catalogue number.

Example: **LI G 551A307 24V/DC**

operator — pipe thread — basic number — voltage

OPTIONS

- Cable glands (Nickel-plated brass): unarmoured cable, catalogue number **88200011** / armoured cable, catalogue number **88200014**

RECOMMENDED INTERFACES

Located in safe areas, these interfaces allow to feed the intrinsically safe solenoid valves located in explosive areas. This equipment must be ordered from its respective manufacturers, specifying that they are intended to feed intrinsically safe solenoid operators:

FEATURES

- Mini-low consumption valves (0,25 W/0,5 W) for use in potentially explosive atmospheres according to ATEX-Directive 2014/34/EU
EC type examination certificate no.: **INERIS 03 ATEX 0249X**
IECEX Certificate of Conformity no.: **IECEX INE 10.0002X**
- Compliance with the Essential Health and Safety Requirements has been assured by compliance with the International and European Standards IEC and EN: 60079-0, 60079-11 and 60079-26
- The valve's Ex ia protection allows it to be installed in explosive atmospheres up to zone 0 or 20. It can be used in the chemical, oil and pharmaceutical industries, or in processing and packaging plants for flammable products (paints, solvents)
- Compact, monobloc pilot valve with spade plug. Connection according to DIN 43650, form C, 9,4 mm pin spacing
- Version with integrated display and electrical protection. LED visible from 3 sides

When ordering, please specify in addition to the basic catalogue number:

- voltage:
- 0,25 W: 24 V DC
- 0,5 W: 12 V DC or 24 V DC

Examples: with connector DIN 43650, 9,4 mm: **30215311AD** 24V DC
 with connector DIN 43650, 9,4 mm: **30215106AD** 12V DC
 with connector DIN 43650, 9,4 mm: **30215106AD** 24V DC

OPTIONS

- Solenoid valves without LED and electrical protection (0,5 W only)

INSTALLATION

- The solenoid valves can be mounted in any position without affecting operation
- Solenoid valve supplied with mounting screws and mounting pad seal(s)
- Electrical connection between solenoid valve and barrier/interface with cable type A or B according to EN 50039
- Installation on single subbase (3 x M5), brass body, catalogue number **30300001**
- Versions with spade-plug connector type ISO 15217/DIN 43650 form C with 8 mm spacing or M12 connection: contact us
- Installation/maintenance instructions are included with each valve

See the list for compatible interfaces and barriers.

This list is for reference only and the user must take into account the cables and the actual supply voltages for the barriers.

The operating conditions are calculated as follows:

0,25 W: **24 V with LED**

$$I_1 \text{ (mA)} = \frac{[V_s - 1,2 - 0,002 (R_b + R_1)] \times 1000}{(R_c + R_1 + R_b)} + 2$$

0,5 W: **12 V or 24 V with LED**

$$I_1 \text{ (mA)} = \frac{[V_s - 1,2 - 0,003 (R_b + R_1)] \times 1000}{(R_c + R_1 + R_b)} + 3$$

This value and the maximum barrier/interface current (if it is non-linear) must be greater than 33 mA (12 V with LED), 25 mA (24 V with LED, 0,5 W), 20 mA (24 V with LED, 0,25 W).

I_1 (mA) Min. supply current of the product

R_b (Ω) Max. barrier resistance

T_a (°C) Max. ambient temperature

R_1 (Ω) Max. resistance of connecting cables

V_s (V) Min. no-load voltage of barrier/interface

R_c (Ω) Max. coil resistance:

$$12 \text{ V with LED} = \frac{288 (T_a + 234 + 10)}{254} \quad / \quad 24 \text{ V with LED} = \frac{563 (T_a + 234 + 10)}{254}$$

COMPATIBLE BARRIERS AND INTERFACES

The 12 V DC and 24 V DC solenoid valves are compatible with the barriers listed in the table below.

0,5 W: The index (1) indicated the 12 V DC versions that are compatible with the 24 V DC barriers.

Located in safe areas, these barriers and interfaces allow to feed the intrinsically safe solenoid valves located in explosive areas. This equipment must be ordered from its respective manufacturers, specifying that they are intended to feed intrinsically safe solenoid valves: 302 1. ...IA., II 1 G Ex ia IIC T6 to T4 Ga, II 1D Ex ia IIIC T85°C to T135°C IP6X Da.

SUBBASES

pipe size	designation	safety code	catalogue number
6/6 polyamide subbases			
instant fittings ⁽¹⁾	single subbase (instant fittings OD 4 mm)	II 2 GD c Ta 50°C T 85°C (T6)	35300069
Zamak subbases			
G 1/8 ⁽¹⁾ , tapped	laterally-connected single subbase	II 2 GD c Ta 50°C T 85°C (T6)	35300047

⁽¹⁾ These subbases can be mounted on omega rail to EN 50022 using 2 clips (clips sold in packs of 10, catalogue number: **33400036**).

OPTIONS

- Joinable subbases

INSTALLATION

- The solenoid valves can be mounted in any position without affecting operation
- Solenoid valve supplied with mounting screws
- Pipe connections G 1/8 have standard thread according to ISO 228/1
- Electrical connection between solenoid valve and barrier/interface with cable type A or B according to EN 50039
- Installation/maintenance instructions are included with each valve

RECOMMENDED INTERFACES

Located in safe areas, these interfaces allow to feed the intrinsically safe solenoid valves located in explosive areas. This equipment must be ordered from its respective manufacturers, specifying that they are intended to feed intrinsically safe solenoid valves 19500036/LISC: II 1G Ex ia IIC T6 Ga, II 2D Ex ib IIIC T85°C Db IP67

OPTIONS AND ACCESSORIES

- Seals and disc made of FPM (fluoroelastomer)
- Version without manual operator
- Version with pneumatic-electric interface

INSTALLATION

- The solenoid valves can be mounted in any position without affecting operation
- **Pre-wired connector, supplied and certified with the product (DIN 43650, 9,4 mm, form C, with 2 m cable length). For connection, only use the connector supplied with the product**
- Solenoid valve supplied with mounting screws and mounting pad seal(s)
- Installation/maintenance instructions are included with each valve

INSTALLATION

- The package consists of the solenoid valve, the coil (installed) and the connector (not installed)
- The coil is provided with an earthing connection
- Additional protection is necessary to protect the coil against mechanical stress and UV radiation
- Easy connection with spade plug connector
- Installation/maintenance instructions are included with each coil
- The spare part coil is always delivered with the connector in a unique reference
